

Abbott Internship Program

20 February 2024

TO WHOM IT MAY CONCERN

Reference for Pham Tram Anh

This is to confirm that Pham Tram Anh is a final year Bachelor of Business student at RMIT University Vietnam. I understand that she is applying for a summer internship with Abbott Internship program.

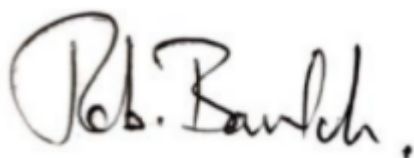

Throughout her time at RMIT has studied towards the Bachelor of Business in Economics and Finance with a focus on data science and accounting. She took my class in Basic Econometrics in semester 2, 2023, and did well in it: achieving a distinction both for the overall scores and her individual and group assignments. This course, which focuses on applied statistics and linear regression analysis uses R Studio as its main software platform and will have given her a solid foundation in the econometric methods and tools which are used in data analysis.

In addition to this course, she also taken the Forecasting and Quantitative Analysis course at RMIT, where she will have learned more advanced time series methods to forecast and analyze business data. Again, she did well in this course. Additionally, Tram Anh has completed some online certificates related to Data Analytics, such as Google Data Analytics, Data Literacy, R-programming, and Tableau. These courses have taught her how to use R and Tableau to manipulate, visualize, and communicate data effectively.

During her studies at RMIT Vietnam, Tram Anh has also completed two internships in R&D and Accounting, where she gained valuable experience working with real-world data and solving business problems. However, I understand that she is extremely interested in pursuing a career in Data Analytics. She is passionate about finding insights and patterns from data that can help improve decision-making and performance.

I commend Pham Tram Anh to your attention as a very suitable candidate for this internship.

Yours faithfully

Bob Baulch, PhD
Professor of Economics
